

Earth Observation for Monitoring and Observing Environmental and Societal Impacts of Mineral Resources Exploration and Exploitation

Developing a sustainable "trialogue" between
mining industry, regulators and the civil society

Dr. Horst Hejny

Mineral Industry Research Organisation – MIRO

Leader EO-MINERS WP5: Communication, dissemination, capacity building and exploitation

Outline

Introduction, general context
Objectives

Work packages
Work already done
Conclusions

Introduction

In 2007, the European Commission Vice President, responsible for Industry policy declared that

“European industries need predictability in the flow of raw materials and stable prices to remain competitive. We are committed to improve the conditions of access to raw materials, be within Europe or by creating a level playing field in accessing such material from abroad”.

General Context

- ETP SMR Strategic Research Agenda
- EU:
Raw Materials Initiative,
Sustainable Development Strategy,
Thematic Strategy for the Sustainable Use of
Natural Resources
- International:
ICMM Sustainable Development Framework,
SDMI,
African Mining Vision 2050,
African Mining Partnership (AMP)

Objectives

EO-MINERS scientific and technical objectives are:

- Assessment of policy requirements at macro (public) and micro (mining companies) levels
- Definition of environmental, socio-economic, societal and sustainable development criteria and indicators to be possibly dealt using Earth Observation (EO);
- Using existing EO knowledge and carry out new developments on demonstration sites to demonstrate the capabilities of integrated EO-based methods and tools in monitoring, managing and contributing reducing the environmental and societal footprints of the extractive industry during all phases of a mining project and
- Contribute making available reliable and objective information about affected ecosystems, populations and societies, to serve as a basis for a sound “trialogue” between industrialists, governmental organisations and stakeholder

Methodology (1/3)

- Analysis of policies related to environmental and social footprint of mineral industries
- Develop high level EO-based data products applicable to the different stages of mining activities within the life cycle of mining operations, over three demonstration sites
 - Sokolov (CZ), lignite open cast mine
 - Witbank (ZA), coalfield
 - Kumtor (KS), gold mine

Methodology (2/3)

- Collecting different EO data of the three demonstration sites
 - Satellite data
Conventional optical sensors, very high resolution optical sensors, radar sensors, InSAR applications
 - Airborne data
Airborne imaging spectroscopy (hyperspectral) survey, airborne geophysics (radiometric, electromagnetic, aeromagnetic)
 - In-situ monitoring methods
ALERT (time-lapse electrical resistivity tomography), ground monitoring network, in-situ point measurements, field spectroradiometry campaigns, information and/or measurements about/of vegetation, soil, groundwater and dust, chemical model and 3D characterisation of the contaminated soil

Methodology (3/3)

- Contribute to the development of generic EO data integration schemes, in particular in view of characterising affected ecosystems, populations and societies and prepare indisputable documents for target groups
- Feed reliable and objective information about affected ecosystems, populations and societies into the sound “trialogue” between industrialists, governmental organisations and stakeholder

Work packages

- WP0 Coordination
(brgm)
- WP1 Policy Analysis and Indicator Identification
(WI)
- WP2 Protocols and Standards for EO Products
(TAU)
- WP3 EO Application and Developments over Demonstration Sites
(DLR)
- WP4 EO Integration and Products
(BGS)
- WP5 Communication, Dissemination, Capacity Building and
Exploitation
(MIRO)

Project Data

- Funding Instrument: **CP-SICA-FP7**
- Total Project Costs: **4.062.877 €**
- EC Contribution: **3.120.837 €**
- Duration: **36 months**
- Consortium: **12 (14) partners from 7 (8)**
- Coordinator: **brgm (France)**
- Start Date: **01 February 2010**
- Web Site: **<http://www.eo-miners.eu>**

Expected Results

- EO-based tools for helping monitoring and observing the impact on the environment and on the society of the exploration and exploitation of mineral resources.
- Address GEO (Group on Earth Observation) and GEOSS (Global Earth Observation System of Systems) process and tasks, by using project outputs to define core elements of an environmental observing system and examining how this system fits in GEO and contributes to building GEOSS
- Means for a sound “trialogue” (definition: “*An interchange and discussion of ideas among three groups having different origins, philosophies, principles, etc.*”) between the three main groups involved, the industry, governmental organisations and other stakeholders (e.g. NGOs)
